

01.Express Server

- Server folder tree

- The node service where data traffic between services occurs.
- keys.js: The file where the environments of the Postgres and Redis services are assigned.
- index.js: The source that manages the data traffic between the Redis service and the Postgres database where the algorithm runs.

01.Express Server

- /all

The screenshot displays a web browser window with a dark theme. The page features the React logo at the top, followed by the text "Changed Changed Learn React". Below this, there are two links: "Home" and "Other Page". A form with the label "Enter your index:" and a "Submit" button is present. The page content shows "Indexes I have seen:" with the values "4, 7" and "Calculated Values:" with the text "For index 4 I calculated 5" and "For index 7 I calculated 21".

The right side of the image shows the Chrome DevTools Network panel. The "Response" tab is selected, showing a JSON array: `[{"number":4}, {"number":7}]`. The "Name" column lists various resources, including "localhost", "bundle.js", "ws", and several files related to the application's build and assets.

01.Express Server

- /current

The screenshot displays a web browser window on the left and the Chrome DevTools Network panel on the right.
